

OWEN OVERSTREET

Data Analyst · Technical Analyst · Business Analyst

QA testing · Technical documentation · Vibe coding (Cursor / AI agents)

Yulee, FL | 904-651-4256 | OwenOverstreet@ymail.com | linkedin.com/in/owen-overstreet-2119776

PROFESSIONAL SUMMARY

Mortgage-technology analyst with 15+ years using T-SQL to query, validate, map, and report on loan and servicing data. Partner with business stakeholders, product, and development to gather requirements, document the work, run QA / UAT testing, and deliver data and configuration changes through production. Active every day in QA testing, technical documentation, and vibe coding with Cursor and AI agents to write SQL, scripts, tests, and docs faster without dropping production standards.

TECHNICAL KNOWLEDGE

Data & SQL	T-SQL / SQL Server (SSMS); ad-hoc reporting; stored procedures; SSIS data-load jobs; data mapping; data validation; XML; Microsoft Excel
QA testing	UAT and lower-environment testing; Prod sign-off; defect vs. training triage; test-loan loads; data-quality checks across DEV / QA / UAT / PROD
Documenting	Requirements gathering; Visio flows; technical write-ups; SOWs / RFWs / work orders; config sheets; SharePoint source of truth; user stories and release notes
AI / vibe coding	Cursor and AI agents for SQL, scripts, QA checks, and documentation; VS Code; Visual Studio 2022; Python (data extraction); Excel, Word, PowerPoint
Platforms	LoanSphere (BK/FC/FCR/IM); MSP; Invoice Management; Mortgage Web Services; Azure; ServiceNow; SharePoint; Visual Studio / TFS; SDLC

PROFESSIONAL EXPERIENCE

Technical Analyst / Senior Business Analyst

Feb 2022 – Present

ICE Mortgage Technology (formerly Black Knight Inc.)

- Partner with clients, BAs, and developers to gather and document business and data requirements; translate needs into configuration, coding, and data changes and stay with each request through implementation.
- Write T-SQL to research production issues, validate data across environments, produce ad-hoc reports, and create scripts plus change/work orders for DBA execution.
- Perform QA testing with the QA team and client before Prod/UAT sign-off: exercise the change, confirm data and configs, and stay with the request through release.
- Document the work end to end — Visio flow diagrams, technical write-ups, SOWs, change/work orders, and user stories — so business rules, data, and code are clear for sign-off.
- Investigate ServiceNow incident tickets using SQL, Visual Studio, and web-app review; identify root cause and communicate findings to client support.
- Vibe code with Cursor and AI agents (plus VS Code) as a daily practice to write SQL, scripts, QA checks, and documentation faster while keeping production standards.

IT Business Systems Analyst III

June 2012 – 2022

Black Knight Financial Services (formerly LPS / Lender Processing Services), Jacksonville, FL

- Dedicated support for Wells Fargo on LoanSphere BK/FC/FCR/IM and MSP mappings — mortgage servicing data for foreclosure, bankruptcy, and invoice management.
- Gathered client requirements and implemented configuration and data-mapping changes across six environments (DEV, QA, UAT, PA, PROD); verified data landed in the correct environment before release.
- Wrote T-SQL mapping scripts (insert/update/delete), attorney updates, and zip-code data changes; submitted to DBAs and tracked execution through all environments.
- Built ad-hoc SQL reports for the client and internal teams; queried multiple environments to validate configurations, find data anomalies, and analyze XML errors.
- Created SOWs for senior management and client sign-off before production; attached RFWs, SOWs, and config sheets to TFS / Service Desk tickets.
- Maintained SharePoint with current production configurations as the source of truth for the client and project teams (definitions and current mappings).
- Ran QA / UAT testing with the client (test-loan loads, config checks across environments) before production sign-off; mentored junior associates and backed up the manager.

Product Support / Data Analyst

Feb 2011 – June 2012

DMEautomotive, Jacksonville, FL

- Supported The Goodyear Tire & Rubber Co. Point of Sale incentive program across the U.S. and Canada; worked with POS vendors and Goodyear to get customer data into the application.
- Produced ad-hoc T-SQL reports for Goodyear and their customers; loaded data into SQL Server and ran stored procedures to add or remove records.
- Monitored daily data-load jobs and SSIS tasks; used T-SQL to troubleshoot failures, correct data-quality issues, and confirm loads completed.

Lead Support Developer / Analytical Development — LoanSphere

March 2008 – Feb 2011

Lender Processing Services Default Solutions (LPSDS), Jacksonville, FL

- Used T-SQL daily to write scripts, return data for reports, and apply changes to the LoanSphere desktop application (foreclosure and bankruptcy) supporting thousands of end users.
- Created new processes, holds, issues, events, data forms, and close reasons; documented the change and confirmed data and business needs with clients through completion.
- QA-tested client-reported issues to separate software defects from training needs; delivered Excel ad-hoc reports and worked tickets to close.

IT / Desktop Support / Jr. Network Associate

Sept 2006 – March 2008

Lender Processing Services / Fidelity Process Management, Jacksonville, FL

- Supported 300+ users and a Process Management application used by 5,000+ users for attorney foreclosure and bankruptcy loans; distinguished software defects from training issues.
- Entered detailed development tickets documenting the defect and the specification needed for the enhancement; used Active Directory, helpdesk queue, and standard desktop support tools.

EDUCATION AND CERTIFICATIONS

- Database course — Florida State College at Jacksonville (formerly FCCJ South)
- Python for data extraction (in progress) · Cursor and AI-agent development (vibe coding)
- Microsoft Certified Professional (MCP) — May 2000 · A+ — Feb 2006 · Network+ — April 2006
- Network + Security course — Jacksonville, FL
