

OWEN OVERSTREET

Technical Analyst · Business Analyst · Developer

Jacksonville, FL | owenstreet7@gmail.com | linkedin.com/in/owen-overstreet-2119776 | github.com/ooverstreet

PROFESSIONAL SUMMARY

Hybrid Technical Analyst, Business Analyst, and Developer with 20 years in mortgage technology (ICE Mortgage Technology / Black Knight / LPS). I write work orders for internal teams and clients to sign, turn those requests into technical work, and stay with each project through production. Proficient in vibe coding with Cursor to design, build, and ship development work end to end.

CORE SKILLS

Analysis	Requirements, process change, impact analysis, dedicated client support, UAT, production support
Delivery	Work orders for internal and client sign-off, scope, seeing projects through to production
Technical	SQL queries and scripts, mortgage servicing platforms, application and desktop support
Development	Vibe coding with Cursor, JavaScript / HTML, Git / GitHub, end-to-end feature delivery

PROFESSIONAL EXPERIENCE

ICE Mortgage Technology 2006 – Present

Formerly Black Knight; previously Lender Processing Services (LPS) / Fidelity · Jacksonville, FL

Business Systems Analyst IV / Technical Analyst

May 2023 – Present

- Write work orders for internal stakeholders and for clients to sign (scope, requirements, development effort); obtain sign-off, then stay with the work through build, test, and production.
- Mix Technical Analyst, Business Analyst, and Developer work: system impact, process design, SQL/data changes, and hands-on implementation.
- Use Cursor for vibe coding to prototype and deliver development work quickly while holding production and client standards.

Business Systems Analyst

2007 – 2023

- Dedicated support for Wells Fargo on Black Knight / LPS mortgage servicing technology.
- Turned client and internal requests into requirements and process changes, then followed each item through development and implementation.
- Used SQL to query and update data for process and application changes. Grew from desktop support and process-change reporting into client-facing systems analysis.

Process Change Analyst

2006 – 2011

- Maintained a process application used by thousands of end users (Fidelity / LPS); wrote SQL queries and scripts for the related database changes.

DME Automotive Data Analyst, Product Support

Jan 2011 – Jun 2012

- Supported product data and end-user issues alongside the core mortgage-technology role.

SELECTED DEVELOPMENT PROJECTS

Independent apps designed and shipped in Cursor, from idea through a working product.

Harbor — Private community app (auth, profiles, moderation, themes) taken from concept to a usable product.

Plainly — Paperwork translator: photo or PDF in, plain-English “what it is / what to do / by when” out.

Beacon — Campus safety MVP for tips, parent alerts, and authority heads-up, delivered as a complete demo flow.

Also shipped — Car Audio Tuner, Mealpath, and other web apps on GitHub, each taken from idea to a finished build.
